

BONEMEAL

NATURAL SLOW RELEASE FERTILISER

Doff® Bonemeal is a slow release plant food that can be used as a root builder around the stems of plants. It can also be used for the planting of trees and shrubs to get them off to a good start and as a general plant food to keep your plants in top quality condition. Doff® Bonemeal is not recommended for use on acid loving plants such as Azalea, Rhododendron and Heathers.

DIRECTIONS FOR USE

Use in Autumn before first frost for Winter boosting, use for new plantings and adding nutrients to garden areas in the Spring after the frost has left the ground.

New Plantings

Use 50g into prepared holes for planting trees, shrubs & roses.

Bulb Planting

Use a light sprinkling into pre-prepared holes in the garden or planters. Use twice in the season, once prior to planting and then again in Autumn after the first frost, to give bulbs a boost before they close down for Winter.

Vegetables & Flower Gardens

Use 75 - 100g per sqm applied and worked evenly into the top 20-30cm of soil. In mulched areas pull back the mulch and scatter the bonemeal in a ring around the plant staying 7-8cm away from the crown or stem, Re-level the mulch and water thoroughly.

Nitrogen (N) Total	4.5%
Phosphorous (P) soluble in water	0.3%
Phosphorous (P) soluble in mineral acids only	5.4%

GENERAL ADVICE

We recommend wearing gardening gloves when handling this product.

Once applied ensure the application is raked in well. Do not leave on top of soil as this product is attractive to dogs.

Do not use in areas where cattle, sheep, goats and deer have access.

Wash hands after use. Store in a safe dry place away from children and pets.

Do not apply during frost or on a very windy day. Do not breathe dust.

Contents may settle during transit. Dispose of packaging safely.
